**FOR IMMEDIATE RELEASE: 10/8/2017**

## **KF ARMORY TO INTRODUCE MIB<sup>2</sup>S AT THE 2017 AUSA ANNUAL MEETING AND EXPOSITION IN WASHINGTON DC**

### **MIB<sup>2</sup>S SUCCESSFULLY DEFEATS 50 CALIBER ARMOR PIERCING INCENDIARY TRACER**

**Alpharetta, Ga.** — KF Armory, LLC is proud to present the Modular Interlocking Ballistic Barrier System known as MIB<sup>2</sup>S at the 2017 AUSA Annual Meeting and Exposition in Washington, DC on 9-11 October 2017. Through innovative design and purposeful development, the MIB<sup>2</sup>S successfully defeats up to 50 caliber armor piercing incendiary tracer (API-T) ammunition while incorporating easy assembly, disassembly, and extreme durability. The MIB<sup>2</sup>S is the ideal solution for creating a rapidly deployable and re-deployable ballistic barrier system for military and law enforcement operations, training, and safety requirements. The objective of MIB<sup>2</sup>S is to provide a highly effective protective barrier for personnel, equipment, buildings, and other critical infrastructure in unlimited applications.

The MIB<sup>2</sup>S is specifically designed to protect against ballistic projectiles and withstand conventional and improvised explosive devices. The MIB<sup>2</sup>S absorbs the projectiles and the resulting increase in density amplifies the protective nature of the system. The MIB<sup>2</sup>S is easily assembled in the field without the need for special tools or formal instruction. The MIB<sup>2</sup>S are available in three threat ratings: Handgun Block rated for NIJ 0108.01 Threat Level IIIA; Rifle Block rated for NIJ 0108.01 Threat Level IV and UL 752 Level 9; and 50 Caliber Block rated for NIJ 0108.01 Threat Level IV+ Special Threat 50 Caliber API-T and UL 752 Level 10. The MIB<sup>2</sup>S are also available in custom threat levels and a variety of colors to meet specific mission requirements.

Military and law enforcement now have a Modular Interlocking Ballistic Barrier System advantage, greatly increasing their ability to safely operate in hazardous environments. If you are attending the 2017 AUSA Annual Meeting and Exposition, please stop by Booth #2753 to learn more about MIB<sup>2</sup>S.
